Abstract (en)

[origin: WO2008058595A1] The invention relates to a roll changing device with a steplessly operating wedge adjusting device. To achieve a particularly small overall size, which is specifically suitable for the conversion of existing rolling stands, it is proposed that the adjusting wedge (8) has a continuously planar wedge surface area (12a, 12b), that the wedge adjusting device (7) comprises a clamping device (16) for fixing the adjusting wedge (8) and that the upper pressure plate (19) in the roll changing device (5) is vertically and horizontally guided.
