Abstract (en)

[origin: DE102006049998A1] The arrangement of a pin has a groove (6) at the extreme end of a pin (1). The pin is secured against turning by caulking with a material (3b) of a disc (3) in the groove. A recess is designed as the groove, which runs diametrically on a front face of the pin. The groove has an U-shaped cross section. The pin has a longitudinal drilling (4) and the longitudinal drilling interspersing cross-hole (5). The longitudinal drilling penetrates the front facing groove. An independent claim is also included for a method for positioning and protection of a pin in a bore against twisting.
