Abstract (en)
[origin: WO2008046502A1] The invention relates to a machine-tool comprising two workpiece carriers (10,13) which face each other on a frame (1), can be moved in the x direction and the y direction, and are provided with workpiece clamping devices (16, 17) also facing each other. A plurality of tool-spindle units (21, 22, 23) are arranged on the machine frame (1), one behind the other in an x direction, between the workpiece carriers (10, 13). Workpieces (18, 19) are machined with a phase shift of a half clock interval.
