Abstract (en)

[origin: FR2910846A1] The device has a door panel (11) with two window-panes (12, 13) separated by an integrated structural element (19) of the panel (11). A curtain (14) is driven by a draw bar (18) and is movable in a plane projecting with glass plane between a folded position and a deployed position for which the curtain permits partial occultation of surface covered by window. Displacement of the curtain is controlled by a single rail (110) formed in the element (19) and in which a pad integrated to the draw bar circulates.
