Abstract (en)  
[origin: US2008156375A1] An outlet connector for a container is provided through which a product can be introduced into the container through the outlet connector. The outlet connector preferably includes a sealing mechanism that can burst once a threshold pressure is exceeded, for example, by the flow of products toward the container. A sealing mechanism is described herein having two layers, wherein one layer is perforated to provide a defined tearing of the sealing mechanism. A method of producing an outlet connector is also provided herein.
