Abstract (en)
[origin: US2010132749A1] A water-conducting household appliance including a treatment container defining an interior of the water-conducting household appliance, the treatment container including at least two components made of different materials, wherein each of the at least two components include an edge section at which a mechanical connection is formed between the at least two components, wherein the mechanical connection is formed in a section protected against moisture, and a seal element that seals the mechanical connection on a side facing the interior of the water-conducting household appliance such that a gap exposed to moisture is formed which is free of a capillary gap.
