Abstract (en)

[origin: WO2008083696A1] The invention describes a drive for a wing of a door, or a sash of a window, having a housing, wherein the housing has at least one housing profile having at least one profile recess that is continuous in the longitudinal extension of the door lock and that is open on the fronts thereof, and wherein the housing profile can be covered on at least one of the fronts by means of a cover. The cover (12) has at least one pin element (13) for affixing the same to the housing profile (7), wherein the element engages in the profile recess (9) on the front.
