Abstract (en)
[origin: FR2910163A1] The system has a data coupling device (4) interfacing with a communication device (5) through a wireless channel for receiving instructions and information to be diffused. The data coupling device controls the information diffusion unit e.g. loud speaker or a display device. The device (4) includes a wireless communication module through which the device (4) receives instructions and information to be diffused. The device (4) includes an output towards an information diffusion line (8) connected to an information diffusion unit. Independent claims are also included for the following: (1) a vehicle equipped with an information diffusion system comprising an information server (2) a method for diffusing information to be informed to travelers in a vehicle e.g. train.
