Abstract (en)  
[origin: WO2008061857A1] The invention describes a stator for an electrical machine, in particular a universal motor, comprising a stator core (20) with a stator yoke (22) and at least two pole shoes (21), which are arranged radially on the stator yoke (22), and a stator winding (30) with at least two coil windings (31), wherein each pole shoe (21) accommodates at least one coil winding (31), characterized in that the coil windings (31) are connected cohesively to the stator core (20) by means of an adhesive.
