Abstract (en)

[origin: EP2095730A1] This footwear was designed to correct foot movement in children with a slight tendency to develop pes valgus, without changing the gait of children without this pathology, using a sole (3) of a non-abrasive material, principally in the area of the heel, to ensure that the geometric shape does not change with continuous use, with a central track of a lower density than the rest of the sole, a high density footbed (6), comprising a cardboard footbed (7) and a cup (1), that consists of a hard part in the form of a channel, integrated in the shoe in the upper part of the sole (3) and aimed at guiding the footsteps, and a removable insole (4) made from a low density mouldable material, so that the whole shoe counteracts the typical rolling of the foot in pes valgus in the inside of the heel.
