Abstract (en)

[origin: EP2095882A1] The bottle (3) has a nozzle (43) for receiving a pump (4) and mounted in a neck of a cap (27) in a movable manner between bottom and top positions. The cap is mounted on a body (5) in a sealed manner. A maintaining unit maintains the nozzle in the top position when the nozzle cannot receive the pump. The nozzle is arranged to cooperate with the pump such that introduction of the pump in the nozzle causes movement of the nozzle to the bottom position and withdrawal of the pump from the nozzle causes movement of the nozzle to the top position.
