Abstract (en)

[origin: EP2095888A1] The device has exhaust units (20, 21) suctioning material from an interior space (12) in a housing (11), where the space has a working area (13). A waste collecting station (24), a table top module (25), a decanting/filling module (26) and a control module (27) are provided in the space and are selectively connected to two suction connectors. The station, table top module, the decanting/filling module and the control module are modular adjustable together and are exchangeable for different operation purposes. The connectors are designed as break-through, a slot, a flange and/or a clutch.
