Abstract (en)
[origin: EP2095955A1] A packaging arrangement includes an ink cartridge and a packaging member enclosing the ink cartridge. The ink cartridge includes a body, a movable member, and at least one resilient member disposed between the body and the movable member. The movable member is configured to move between a first position and a second position relative to the body when the at least one resilient member expands and contracts, and a distance between the second position and the body is less than a distance between the first position and the body. A pressure inside the packaging member is less than a pressure outside the packaging member, and the movable member is retained in the second position when the ink cartridge is enclosed within the packaging member.
