Abstract (en)
[origin: US2009212048A1] A transport and storage container for liquids includes an inner container of plastic material, an outer casing of a metal mesh or sheet metal, and a pallet-like underframe. The container is configured for manipulation by a transport means. A bottom of sheet metal rests on corner and middle legs for supporting the inner container equipped with a closable filling socket and a drain socket for connection to a removal fitting, wherein the inner container has a drain bottom with a middle draining groove which extends with a slight downward inclination from the rear wall of the container to the drain socket arranged at the end wall of the container for connection of the removal fitting. The bottom of the underframe adapted to the bottom of the inner container is divided into two bottom sections which are inclined downwardly from the two longitudinal rims of the bottom in the direction toward the middle axis of the bottom and from the rear rim toward the front rim of the bottom, and wherein the two bottom portions are equipped with stiffening corrugations having corrugation troughs located in a common horizontal plane.
