Abstract (en)

[origin: EP2096200A1] The needle (1) has a longitudinal needle body (5) and a transfer spring (8) with an end permanently connected to the needle body and projecting laterally beyond the needle body and another end seated in a longitudinal slit of the needle body. The longitudinal slit includes an inlet that is open toward the fixed end of the transfer spring, where the needle body includes an elongated form with a hook (6) on its one end, and the longitudinal slit is open on a side facing away from the hook.
