Abstract (en)

The invention relates to a fastening device comprising at least one holding portion (1), at least one spacing portion (2) and at least one hollow shaft (3), so that the spacing portion is located between the holding portion and the hollow shaft. The fastening device according to the present invention may for example be used to fix for example planks/boards to a support substructure like for example a girder substructure to get a plank/board flooring, which may be used for example on sunroofs, on terraces, in bathrooms, spa areas or around swimming pools.
