Abstract (en)
There is disclosed a module (1) and a method wherein a controllable module, which is mounted on the inner side of a door over a cylinder lock (2) provided with a latch bolt and/or a dead bolt, comprises a hand knob (3) connected to the cylinder lock (2), by means of which the door can be opened at all times, and wherein at least one control unit communicates wirelessly with control means of the module (1), which are connected to the cylinder lock (2), by means of which the position of the latch bolt and/or the dead bolt is controlled.
