Abstract (en)
[origin: AT505769A4] The stove has a combustion air that is conveyed over a primary air supply (9), and a secondary air supply (10) in a combustion chamber (4). A temperature-dependent regulation of the secondary air supply takes place over a regulating unit in an operating mode. The regulating unit has a flow governor and a temperature probe (6). An independent claim is included for a method for operating a stove, particularly a chimney stove.
