Abstract (en)

[origin: EP2096361A2] The house hold appliance door has a door handle, which is swiveled around a rotating axis running parallel to a door axis. The door handle is assigned to a control gear, which is resonated to the door handle relative to a door during pivoting. Two shafts (4) of a control gear are pivoted inside a holding part around the rotating axis. An independent claim is included for a method for assembling a house hold appliance door.
