Abstract (en)

The egg tray of this invention that was developed for freezers comprises two parts (1, 2) that have at least one egg insertion slot on their upper surfaces (7) and that can fold onto each other by pivoting with respect to a joint point; a pair of mounts (4, 4') that extend downwards from the opposing sides of both of the parts (1, 2). In the open position of the egg tray mounts (4') are side to side and one of the internal edges (8) of the mounts (4') faces each other. The egg tray further comprises a "T" shaped protrusion (6) that extends outside from an internal edge (8); and a "T" shaped groove (5) on the other internal edge (8) such that the protrusion (6) can attach, and inside it the protrusion (6) can turn and move back and forth.
