Abstract (en)
[origin: WO2008068395A1] The device for topping unlifted root crops of the beet type comprises a drive shaft (1) which, over all or part of its length, has tools (O) capable of removing in particular the leaves under the effect of the rotational drive of said drive shaft. Each tool consists of at least one endless belt with arrangements (2a) capable of striking the tops of the crops in order, at the same time, to cut off the leaves in conjunction with a limited angular displacement of the belt or belts at the moment of striking.
