Abstract (en)  
[origin: WO2008066450A1] The invention relates to a snuff box comprising a lid (4) and a bottom part (1a-c) rotatable relative to each other, and dividing wall (2a, 2b) which divides the interior of the snuff box in two volumes. The dividing wall (2a, 2b) is divided into a first dividing wall part (2a) and a second dividing wall part (2b), which are moveable relative to each other. The lid comprises a driving element (6, 2b) arranged to shift one dividing wall part. The driving element (6, 2b) may further be constituted by the second dividing wall part (2b) itself. The invention further relates to such a snuff box where the lid (4) is provided with two lid portions (5a, 5b) which give separate access the two volumes that the dividing wall separates the box into. In yet another version the snuff box may further be provided with indicators (7) acting as a volume indicator. These indicators may partially be constituted by the driving element.
