Abstract (en)

[origin: WO2008061645A1] A medical appliance for treatment of the human or animal body with mechanical pressure waves or shock waves has a device (16) for generating the pressure waves or shock waves, which device (16) comprises at least one periodically movable impact part (18), a drive (42) for the at least one impact part (18), and at least one baffle element (26) against which the at least one impact part (18) strikes in order to generate the pressure waves or shock waves in the baffle element (26). The at least one impact part (18) is movable along a circular trajectory (28) and, in moving along the circular trajectory (28), strikes against the at least one baffle element (26).
