Abstract (en)
[origin: WO2008065467A1] The BioWing device is provided with a suitable and optimized shape allowing it to be placed in a suburethral position independently of the access route, which can be a retropubic or transobturator route, without the need for tightening in order to ensure the support function. In addition, the fact that the BioWing device is made from a totally biodegradable material considerably reduces the risks of tissue erosion and the creation of foci of infection.
