Abstract (en)

[origin: DE102006059525B3] The method involves generating a message in case an image derives a data set from a cycle, which contains an object identifier of a misrouted object (Se-1.3) i.e. postal item, and not from the misrouted object such that an error is occurred in another cycle of another object, where the object identifier is emitted as an object identifier of the latter object. Another message is generated if no data set is found with an image of the misrouted object under the emitted data set with a reading result such that a delivery point specification (ZP-1.3) of the misrouted object is read as false. Independent claims are also included for the following: (1) a system for controlling the transport of multiple objects (2) an arrangement for transporting multiple objects.
