Abstract (en)  
[origin: WO2008077163A1] The invention relates to a moulded part which is hollow at least in sections and comprises a wall (3), in its hollow region, which at least partially surrounds the cavity (49) of the moulded part and comprises a moulded element (6, 40, 41, 42) in at least one area (5). According to the invention, a local weakening (7-12) and/or holding edge are formed in the wall (3), at a distance from the moulded element (6, 40, 41, 42), in the direction of a main deformation line (52) of the moulded part, said weakening and/or holding edge extending at an angle to the main deformation line (52), at least over part of the extension of the moulded element (6, 40, 41, 42) and adjacently thereto. The invention also relates to a method for producing such a moulded part.
