Abstract (en)
[origin: WO2008046117A1] Disclosed is a grid structure, especially of a reinforcement grid or floor mounting grid, comprising a plurality of wire paths (1, 1') which are arranged next to one another and are formed by wires that are bent in a zig-zag shape, and a plurality of particularly parallel bars (2, 2'). The wires of the wire paths (1, 1') embrace the bars (2, 2') in the form of substantially closed loops (3). The bars (2, 2') are clamped within the loops (3) of the wire paths (1, 1') in order to be fastened to the wire paths (1, 1'), the bars (2, 2') being twisted or tilted in relation to the loops (3) in at least one direction in order to be clamped within the loops (3) of the wire paths (1, 1').
