Abstract (en)

[origin: WO2008060480A2] A system controlled by a data bearing record includes a card reader that is operative to read data from user cards including identifying data and to authorize operation of an automated banking machine responsive to the identifying data. The automated banking machine includes a deposit accepting device. The deposit accepting device is operative to receive a stack of sheets and to separate each sheet from the stack through operation of a picker. Each sheet is aligned with the sheet path and analyzed by analysis devices including at least one magnetic read head, an imager and/or a validation device. Sheets determined not to have at least one property of a genuine sheet are returned to a user of the machine. Sheets determined to have at least one property of genuine sheets are processed and stored in the machine.
