Abstract (en)

[origin: WO2008061670A1] In order to provide a ring-rail (1) of a ring-spinning machine in a simple way with a lubricant channel (5) for supplying the spinning rings (14) with lubricant, it is proposed to clamp a lubricant channel (5) of U-shaped cross section to the underside of the ring-rail. The lubricant channel (5) advantageously comprises plastic. Two felt strips (7, 8) stand laterally in the lubricant channel (5), between which two felt strips (7, 8) a lubricant wick which leads to the spinning rings (14) can be pressed in a manner which guides lubricant by means of a helved lug (13). The felt strips (7, 8) leave a lubricant channel (9) free between them, through which lubricant channel (9) the lubricant can be distributed easily over the entire length of the ring-rail (1).
