Abstract (en)

[origin: WO2008065105A1] A window structure comprising a window frame and provided with an outer plate-shaped element and further provided with a blinding plate and at least one fastener, fastening said blinding plate in the window frame. The fastener is fastening the blinding plate between surfaces of the window frame which surfaces are substantially perpendicular to a major surface of the blinding plate. The fastener of the invention comprises: 1) at least one engagement means prepared for engaging with a recess in the window frame, in order to when in use hold the fastener in place in the window frame, 2) at least one positioning portion for when in use preventing the blinding plate from being moved further in the direction of the positioning portion 3); at least one securing element for securing the blinding plate, said at least one securing element will in use engage with an edge surface of the blinding plate, in order to fix it in position.
