Abstract (en)

[origin: CA2671489A1] The invention relates to a method for producing individual patterns from a generically specific prototype. According to said method, the prototype is stored in the form of electronically readable prototype data (8), and individual pattern data (14, 16, 18) is produced from the prototype data by electronic data processing. The individual pattern data is modified in relation to the prototype data such that the individual patterns differ from the prototype and from each other in such a way that they are also generically specific patterns.
