Abstract (en)
[origin: DE102006056724B3] The device has side parts (10, 11) with a side wall (12) attached in a support (13), and a cover wall extending towards the side parts and attached in the side wall at a side opposite to the support. Front sides of the cover wall point on each other have a distance from each other, where the distance corresponds to an outer diameter of a conductor (7) connected with an insertion part (2). A spring arm (20) supports a locking unit points towards the support, and the insertion part is retained between the side parts against shifting.
