Abstract (en)
[origin: FR2910210A1] The device selects a command to be carried out based on number of control characters in a control character sequence sent by an emitter device connected with an electronic control system, where the characters indicate parameters to be associated with the command. The characters are preceded or followed by a specific character present on a telephone keypad. A sequence having three figures or less than three figures is interpreted as a command for transferring telephonic communication to a contact identified by a number corresponding to the characters.
