Abstract (en)

[origin: EP2098469A2] The method involves inputting the nominal distance between a sheet edge (24) and a mark (23) in a control unit of a sensor. The detected measuring field is determined and monitored by the sensor. The position of the mark and a sheet (6) are determined by the sensor. Independent claims are included for the following: (1) a method for adjusting the sheet; (2) a method for side adjustment of sheet, which is made up of paper, cardboard or plastic; (3) a method for setting a device for side adjustment of sheet; and (4) a method for extent adjustment of the sheet.
