Abstract (en)

[origin: EP2098662A2] A fitting and inspection/repair pit (10) has two longitudinal side-walls (12), front side-walls fitted on the end side and a floor (14). The walls and the floor are each partly formed as single or double walls with a cavity (17) in between for retaining a hardening filler like lightweight/breeze concrete. Water-collecting channels (19) extend outwards at the sides and link to the upper boundary of the longitudinal side-walls and, if required, of the front side-walls. An independent claim is also included for a system for disposing of dirt and effluent in an area of two or more fitting/inspection/repair pits.
