Abstract (en)
[origin: EP2098669A1] The device (1) has sliding elements (3) sliding opposite to a guiding rail (8) and for being fixed to a door panel. An end stop (5) is connected to the guide rail so as to limit travel of the sliding elements. The rail has portions (A, B) arranged at the level of a reception space and at passage of door in a space to be closed. The end stop is connected to the portion (A) of the rail. A section (2) slides with respect to the rail. The stop is fixed to the section, and the section is fixed to the rail by a fixation unit i.e. locking screw, arranged at the portion (B) of the rail. An independent claim is also included for a frame for a retractable sliding door, comprising an inner post.
