Abstract (en)

A method of resolving a television channel identifier into a television channel locator is described. The method is performed in a resolving system comprising a client connected to at least one server, the server comprising a resolution function. The method comprising the steps of: receiving a resolution request from the client, the request comprising a television channel identifier, preferably a standardized television channel identifier, identifying the name of the television channel; the resolution function resolving the television channel identifier into one or more television channel locators, wherein the television channel locator comprises the location of a broadcast provider capable of providing the broadcast identified by the television channel identifier to the client.
