Abstract (en)

The present invention discloses a method for acquiring radio network temporary identification of High Speed Downlink Shared Channel, comprising: a radio network controller, via signaling, notifies to the base station the radio network temporary identification of High Speed Downlink Shared Channel which is available for an user equipment in the common state of enhanced connecting mode; the base station acquires the radio network temporary identification of High Speed Downlink Shared Channel from the signaling; and when the base station needs to send the data in the common state of enhanced connecting mode, the radio network temporary identification of High Speed Downlink Shared Channel is used as a mask for Shared Control Channel in High Speed Downlink Shared Channel to perform baseband processing such that it is used as an identification with which the user equipment monitors the Shared Control Channel in High Speed Downlink Shared Channel and the data of High Speed Physical Downlink Shared Channel is received, thereby guarantee the user service quality.
