Abstract (en)
[origin: FR2909550A1] The bed (1) has a bidirectional lateral translation disengagement unit (20) for allowing the lateral displacement of a leg-rest (6) of a bedding plane with respect to a seat of the plane, or the lateral displacement of the seat with respect to the leg-rest, along a translation movement oriented in the direction transversal to the plane, for releasing the frontal access to the seat. A stable position adjusting unit (21) varies the stable position of the seat and/or the leg-rest with respect to the ground.
