Abstract (en)
[origin: DE202006018673U1] The defibrillator has a linked housing (1) and a support base. The linked housing is subdivided into housing modules e.g. preceding and succeeding links (A, B), where defibrillator components are arranged on the preceding and succeeding links. The components are coupled with each other and movable relative to each other. The preceding and succeeding links are arranged next to each other like a chain and are small and flat.
