Abstract (en)
[origin: WO2008067907A1] The invention relates to a bearing plate (1) for positioning containers (10), having a basic body (3), having at least one pressure-exerting element (4), which is spring-mounted on the basic body, wherein the pressure-exerting element has at least one elongate pressure-exerting portion (4a) extending parallel to a plane of the basic body, and having a positioning body (5), which is arranged on the basic body. According to the invention, the positioning body (5) is arranged in a releasable manner on the basic body (3) and has at least one opening (6) through which the pressure-exerting element (4) projects at least in part.
