Abstract (en)

[origin: WO2008069732A1] A method to create a volume restricted climate zone in connection to flats admitting a stimulating and developing life in flats in at least two different house bodies, wherein a roof and side wall(s) are arranged between the house bodies to create said climate zone. The invention is characterized in that the ventilation and the regulation of the temperature in said climate zone are arranged to take place with the ventilation and the temperature control in the accompanying flats in such a way that heating, cooling and air exchange of the flats, to a biggest possible extend involve said climate zone, and that the carbon dioxide enriched outgoing air from the flats passes said climate zone, and that oxygen enriched air from said climate zone to a biggest possible extend is used as incoming air to the flats.
