Abstract (en)
[origin: WO2008071507A1] The invention relates to a method for operating an injection valve (10), in particular, a fuel injection valve on an internal combustion engine of a motor vehicle, the injection valve (10) comprising a piezoelectric actuator (12) for operating a valve needle (13), coupled to the actuator (12) preferably by hydraulic means. According to the invention, starting from an output voltage ($U_{₀}$) corresponding to a first operating state for the injection valve (10), the actuator (12) is recharged i.e. charged or discharged, to a target voltage ($U_{₁}$) corresponding to a second operating state of the injection valve (10), over a given voltage difference (ΔU).
