Abstract (en)

[origin: WO2008068088A1] A method for operating a radar system and a radar system for carrying out the method, in particular a microwave radar system for applications in or on motor vehicles, in which at least one target object (100) and at least one possible concealing object (110) are sensed by radar equipment, there is in particular provision that it is detected (210 - 220) whether a concealment situation of the at least one target object (100) by the at least one concealing object (110) is occurring, and if the concealment situation is detected it is not automatically assumed that the target object (100) has been lost.
