Abstract (en)
[origin: EP2100533A1] The device (1) has a lipstick lead (3) partially arranged in housing (2). A lip outline stick lead (4) is partially arranged in the lipstick lead. A transport unit (5) transports the lipstick lead partially out of the housing and into the housing independent of the lip outline stick lead. A rotary mechanism (6) includes threads (7) at an inner side of the housing. The housing includes a storage for two components, where the storage is connected with an opening in the lip outline stick lead. The two components for application are transported through the opening.
