Abstract (en)

[origin: EP2100733A1] The machine (1) has a conveying device (2) e.g. linear motor, for conveying hollow articles (5), and a drying station (11) for drying ink on the articles. A machine controller controls conveying process of the articles. Printing stations (10) accommodate a printing module (9) that comprises a drive unit and is connected to a machine controller via an interface. A printing module prints the articles by a printing process selected from screen printing and/or flexographic printing and/or offset printing and/or cold stamping and/or hot stamping and/or laser color transfer and/or ink jet printing.
