Abstract (en)

[origin: EP2100749A1] A correction fluid applicator with an applicator tip (22) attached via a stem (20) to the cap (30) of a container (40) containing correction fluid. The applicator tip slides into a foam sleeve (10) made from soft polyurethane or polyester foam. This sleeve is fixed over the applicator tip at the distal end of a specially designed stem (20). The foam sleeve (10) has absorbent qualities that enhance the storage of correction fluid during the transfer from container to application surface. The applicator can be inserted into the container so that the foam sleeve is at least partially immersed in correction fluid even when the quantity of fluid is low.
