Abstract (en)

[origin: EP2100791A1] The chassis (1) has a lower surface (2) for receiving equipments (4) e.g. wiring duct, extending under the chassis. The surface comprises fixation rails (6) for fixing the equipments, where the rails are spaced along transverse direction and receive a fixing unit (8). A heat insulation panel (18) extends between the rails against the surface. The panel is fixed against the chassis by sheets (22) respectively fixed to the rails. Each sheet has a fixation unit for fixing the panel, and is fixed against the rails by the fixing unit (8). Intumescent adhesive strips (20) are glued to the sheets.
