Abstract (en)

[origin: EP2100816A1] The container liner (1) consists of transparent, UV-constant, shock resistant polycarbonate. Cold-formed curve (4) and stability curve (5) are arranged at the container liner, where the curves are formed by considering maximum outer fiber strain at a ratio of wall thickness and bend radius with a factor greater than 100. The container liner is manufactured from a piece or individual added sections by Butt welding.
