Abstract (en)

[origin: EP2100837A1] The feeder (1) has a gripper drum (2), which exhibits a gripper (12) for removing printed sheet (7) from a stack (6). A slot (15) is provided in a circumference area (17) of the drum. A delay device is provided downstream of a stopper (16) for minimizing the speed of the sheet, where the sheet is stored in an inverted direction on a gathering chain (5). The delay device has an auxiliary stopper (21) that rotates with the drum in a same direction. The auxiliary stopper possesses reduced speed than the drum, where the sheet upstream of the stopper is slowed down at the auxiliary stopper.
